PROJECT OVERVIEW

MediCare | Doctor Appointment Booking

A single-page clinic prototype for discovering specialists and requesting an appointment.

Introduction

MediCare is a responsive appointment-booking webpage built with HTML and CSS.

It presents clinic information, specialist profiles, a booking form, consultation hours, and contact details.

Find a specialist

Eight doctor profiles and specialties
Experience and available days
Consultation fees and Book Now links

Request a visit

Required contact and appointment fields
Doctor and preferred-time selectors
Optional reason-for-visit text area

Use on any screen

Responsive doctor-card layout
Navigation links to page sections
Visible focus styles and hover feedback

Built with semantic HTML, CSS, and native form controls

USE AND ASSESSMENT

Applications & Conclusion

A useful front-end prototype for clinic websites and web-development learning.

Applications

- Clinic landing-page and appointment-flow prototype
- Learning example for HTML forms, CSS, and anchors
- Starting point for a specialist and schedule directory

How it works

1. Visitors review doctor specialties, fees, and availability.
2. Book Now links jump to the appointment form.
3. Visitors select a doctor, date, and preferred time.

Conclusion

MediCare organizes doctor discovery, appointment requests, clinic hours, and contact information in one page.

Responsive cards and labeled form fields help visitors move through the request flow on desktop or mobile.

The form uses GET with a placeholder action, so requests are not saved and appointments are not confirmed.

Scope: front-end demonstration; it does not provide medical advice or live appointment availability.
