PROJECT OVERVIEW

PinkCart | Online Shopping Website

A simple storefront concept for browsing products, comparing offers, and placing an order.

Introduction

PinkCart is a single-page shopping storefront created with HTML and CSS.
It guides visitors from a welcome banner to product cards, special offers, an order form, and contact details.

Browse

Anchored navigation and Shop Now CTA
Three product cards with icons
Descriptions and displayed prices

Compare

Special-offer table lists original
and offer prices for each item
Buy Now buttons link to the order form

Order

Required customer and delivery fields
Product selector and quantity limits
Responsive layout, hover effects,
and visible keyboard focus styles

Front-end demonstration using semantic HTML, CSS, and native form controls

USE AND ASSESSMENT

Applications & Conclusion

A practical starter design for small retail concepts and front-end learning.

Applications

- Small retailer storefront or product catalog prototype
- Classroom demonstration of HTML forms and CSS layout
- Starting point for a basic online ordering workflow

How the page works

1. Visitors browse products and review special offers.
2. Buy Now links jump to the order section.
3. The customer selects a product and submits details.

Conclusion

PinkCart combines product discovery, price comparison, and a structured order form in one responsive page.

Its clean pink theme, product cards, offers table, and native form controls make the shopping flow easy to follow.

The form currently uses GET with a placeholder action; it does not store orders, process payments, or confirm delivery.

Scope: front-end prototype; a production shop needs secure order handling and payment integration.
